What is a Transaction Hash
Where to Find the Transaction Hash

This guide is designed to teach you how to find the Transaction Hash for your transaction on the Ronin blockchain.

What is a Transaction Hash

A transaction hash is a unique identifier for every transaction made on the blockchain. No two transaction hashes will ever be the same. Usually you can spot a transaction hash as it is a long string of alphanumeric characters.

If you visit the blockchain, every transaction has a transaction hash attached to it:

Selecting the transaction provides more information, and you can see the full transaction hash at the top of the page, where you can copy it using the two squares on the right side:

Where to Find the Transaction Hash

So where do you find your own transaction hash? First, you need to locate the transaction that you made. ***If there's no transaction and no transaction hash, then the transaction does not exist.***

On PC

- Select your Ronin Extension from your browser extensions.
- When the extension is open, choose **Activities** and a list of your most recent transactions will appear under the tab. Each of these has their own transaction hash.

This will copy the transaction hash to your clipboard. Now you can paste it wherever it is needed.

On Mobile

- Go to your Ronin App with the account logged in/selected.
- On the navigation bar at the bottom of the app, select Activity:
